Product Details Portal

Writeup

1. Start

2. Create a new dynamic web project with required servlet and jsp jar files.

3. Create a POJO named **Product** with attributes – name, description, and price.

4. Create a JSP file named **SubmitDetails.jsp** that displays a form for entering product details.

5. In the form, provide input fields for the product name, description, and price.

6. Add a submit button to the form to submit the entered data.

7. Create a servlet named **ProductServlet** to handle form submission.

8. In the servlet, retrieve the form data (name, description, and price) from the request parameters.

9. Create a **Product** object and set its properties with the retrieved form data.

10. Store the **Product** object in the session for temporary storage.

11. Forward the request to **ProductInfo.jsp** for displaying the product details.

12. Create a JSP file named **ProductInfo.jsp** to display the product information.

13. Retrieve the **Product** object from the session.

14. Display the product name, description, and price in a table.

15. End
